```
1 package week12;
2
3 /**
4  * Data class representing a game message for network communication.
5  *
6  * Example request (client → server):
7  * {"boardState":"0000000000","move":"5"}
8  *
9  * Example response (server → client):
10 * {"boardState":"200010000","status":"Computer turns"}
11 *
12 * Possible status values:
13 * - "Computer turns"      game continues
14 * - "You wins!"          human won
15 * - "Computer wins!"     computer won
16 * - "Draw!"              draw
17 * - "Cell is occupied!"  invalid move, board unchanged
18 */
